Cardiovascular Technologist and Sonographer

The certified cardiovascular technologist and sonographer perform diagnostic examinations and/or therapeutic interventions of the heart and/or blood vessels at the request or direction of a physician in one or more of the following concentrations:

- · Invasive cardiovascular technology—cardiac catheterization
- Adult echocardiography
- · Pediatric echocardiography
- Noninvasive vascular study—vascular ultrasound
- · Cardiac electrophysiology

History

In December 1981, the AMA Council on Medical Education (CME) officially recognized cardiovascular technology as an allied health profession. Subse-

quently, an initial draft of the proposed *Standards and Guidelines* for the Accreditation of Educational Programs in Cardiovascular Technology was finalized in 1983.

Career Description

The cardiovascular technologist is qualified by specific didactic, laboratory, and clinical technological education to perform diagnostic or therapeutic procedures

in various cardiovascular or peripheral vascular procedures. Careers in cardiovascular technology include:

- Invasive cardiovascular technologists are responsible for maintaining the cardiac catheterization laboratory and assisting cardiologists in the catheterization procedures used to diagnose and treat the various diseases of the cardiovascular system.
- Adult and pediatric echocardiographers are cardiac sonographers who perform echocardiography examinations to evaluate heart function and physiology under the supervision of cardiologists to include cardiac stress testing and assist in trans-esophageal echocardiography. Echocardiography procedures are performed on adults and pediatric patients (infant through adolescence).
- Non-invasive vascular ultrasound sonographers work under the direction of various clinical disciplines including vascular surgeons, interventional radiologists, or cardiologists to perform non-invasive vascular ultrasound and other non-ultrasonographic, procedures to evaluate the extra- and intracranial, peripheral and visceral vascular systems.
- Cardiac electrophysiology technologists are responsible for maintaining the cardiac electrophysiology laboratory and assisting cardiologists in the various procedures used to diagnose and treat patients with cardiac arrhythmias.

Employment Characteristics

Cardiovascular technologists provide diagnostic services to patients in medical settings under the supervision of a doctor of medicine (MD) or osteopathy (DO).

The procedures performed by the cardiovascular technologist may be found in:

- Invasive cardiac catheterization or endovascular laboratories, where cardiac, electrophysiologic, and vascular catheterization procedures are performed;
- Noninvasive cardiac (Echocardiography) laboratories and hospital inpatient settings, where cardiac ultrasound and exercise stress tests are performed.

Vascular laboratories and hospital inpatient settings, where peripheral vascular duplex ultrasound, segmental blood pressure, transcutaneous oxygen tension, transcranial Doppler and plethysmographic studies are performed.

Salarv

Although salary may vary significantly depending on region and demographics, entry-level salaries range from \$40,000 to \$50,000. The overall average is \$50,000

to \$65,000, with the upper-level ranges from \$75,000 plus.

Data from the US Bureau of Labor Statistics (www.bls.gov/oes/current/oes292031.htm) from May 2011 show that wages at the 10th percentile are \$27,430, the 50th percentile (median) at \$51,020, and the 90th percentile at \$79,290.

In addition, the American Society of Echocardiography has a salary survey that includes data for cardiovascular sonographers, and is available at www.asecho.org/i4a/ams/amsstore/category_id=19.

For more information, go to www.ama-assn.org/go/hpsalary.

Employment Outlook

Employment of cardiovascular technologists and sonographers is expected to increase 29% through the year 2020, much faster than the average for all occupa-

tions, according to the BLS. Demand will stem from the prevalence of heart disease and an aging population, which has a higher incidence of heart disease and other complications of the heart and vascular system..

Educational Programs

Length. Programs are available in colleges, hospitals, medical centers, or branches of the United States Armed Forces. Program length ranges from 1 year

(hospital certificate), 2 years (associate degree) to 4 years (baccalaureate degree).

Prerequisites. High school diploma or equivalent or qualifications in a clinically related allied health profession. Requirements are determined by institutional requirements and concentration(s) studied.

Curriculum. Curricula of accredited programs include didactic instruction, laboratory experiences, and patient-based clinical instruction. Suggested areas of instruction are outline in the National Education Curriculum for Sonography and the core curriculum include an introduction to the field of cardiovascular technology, general and/or applied sciences, human anatomy and physiology, basic pharmacology, and basic medical electronics and medical instrumentation. Emphasis, following the core curriculum, is given in the concentration(s) selected: invasive cardiology, noninvasive/ echocardiography, noninvasive peripheral vascular, and cardiac electrophysiology study. Both didactic instruction and clinical experiences are provided in these areas.
